June 1943

A
LIST OF DEHYDRATION PLANTS

This list of dehydration plants is the best available at this time, but it is known to be somewhat incomplete. Because of the continual changes taking place in this field, it is virtually impossible to compile a list of dehydration plants that is entirely up to date.

Most of the plants listed are in operation at this time or will be in operation before the end of the summer. Where the information was available, footnotes are carried to indicate the status of the plants at this date, but this, too, is not fully complete.

Four industries are listed: milk, eggs, vegetables, and meat.

According to these lists, there are 1,107 roller process dried skim milk plants and 204 spray process dried skim milk plants; 13 meat plants, four of which are under construction; 126 egg drying plants with 20 under construction; and 176 vegetable dehydrating plants of which 66 are under construction.
